

Special Section on System LSI Technologies and Business Models for Sub-100nm Technology Node

Editorial Preface	Fuminori ITO	89
1. Sub-100nm System LSI and Its Business Model	Tsugio MAKIMOTO	90
2. LSI Circuit Design Technique	Tadahiro KURODA	96
3. System LSI Design for Manufacturing	Nobuyuki NISHIGUCHI	102
4. Subject and View of Semiconductor Technologies for Sub-100nm Node Tadahiro OHMI, Masaki HIRAYAMA, Yasuyuki SHIRAI, and Akinobu TERAMOTO		109
5. Gate Stack Technologies of Advanced MOSFETs	Akira TORIUMI	117
6. Emerging MOS Transistor Technologies	Toshiro HIRAMOTO	123
7. Low-k/Cu Multilevel Interconnect Technologies	Nobuyoshi KOBAYASHI	130
8. Three-Dimensional LSI Device Packaging and Integration Technologies Manabu BONKOHARA and Kazumasa TANIDA		139

Technical Survey

Computer Aided Surgery : Current Status and Future Directions	Yoshinobu SATO	144
Application-Level Multicast	Taku NOGUCHI and Miki YAMAMOTO	151
The Collision Problem of UHF RF ID Systems Yasushi SOGABE, Hideto AIKAWA, Tsutomu IWAHASHI, and Toshihisa KAMEMARU		156
Molecular Communication	Satoshi HIYAMA, Yuki MORITANI, and Tatsuya SUDA	162

Lecture Series

Basis of Microwave Synthesizers [III]: Noise in Microwave Active Device	Kazuhiko HONJO	167
---	----------------	-----

Memoirs

Birth of Computer Vision and the Growth	Yoshiaki SHIRAI	173
---	-----------------	-----
