

Special Issue : New Paradigm Brought by Advanced Photonic Devices

Editorial Preface	Kazuhiko HIRAKAWA	921
1. Prospects of Advanced Nanophotonics : Quantum Dots and Photonic Crystals	Yasuhiko ARAKAWA	922
2. Recent Progress of Quantum Information Processing		
2-1 Quantum Computation Using Semiconductor Quantum Dots	Shunichi MUTO, Satoru ADACHI, and Hirotaka SASAKURA	931
2-2 Single Quantum Dots for Quantum Cryptography	Tatsuya USUKI	940
2-3 Quantum Repeaters and Quantum Transfer	Hideo KOSAKA	946
2-4 Photon Detection for Realizing Quantum Information Technology	Masahide SASAKI and Mikio FUJIWARA	952
2-5 Photon Detection Technology Using Superconducting Electronics	Shigehito MIKI and Zhen WANG	959
3. Advanced Photonic Control by Nanostructures		
3-1 Progress of Photonic-crystal Lasers	Susumu NODA	965
3-2 Recent Progress in All-optical Control by Photonic Crystals	Masaya NOTOMI	971
4. Novel Applications of Plasmonics		
4-1 Super Bright Light-emitting Devices Based on Plasmonics	Koichi OKAMOTO	979
5. Prospects of Advanced Semiconductor Lasers		
5-1 Wavelength Widening and Performance Improvement of Vertical-cavity Surface Emitting Lasers	Tomoyuki MIYAMOTO	987
5-2 Quantum-dot Lasers and Amplifiers	Mitsuru SUGAWARA	995
5-3 Recent Progress in Short-wavelength and Long-wavelength Quantum Cascade Lasers	Keita OHTANI	1002

News Analysis

Integratable Photonic Bit Memories with Extremely Small Power Consumption : Enabled by Photonic Crystal Ultrasmall Cavities	1008
A Millimeter-band Transmitter Capable of Data Transmission Speeds Exceeding 10Gbit/s : World's First Pulse Transmitter Operating in 70-100GHz Using Impulse Radio	1009
