Agenda

1

5G Deployment and Telco Edge Computing

2

KDDI XR Strategy

3

Edge Computing use cases

4

GSMA TEC Trial

5G Deployment and Telco Edge Computing

5G Launch in March 2020 and Now...

For **wide variety** of our customers' experience

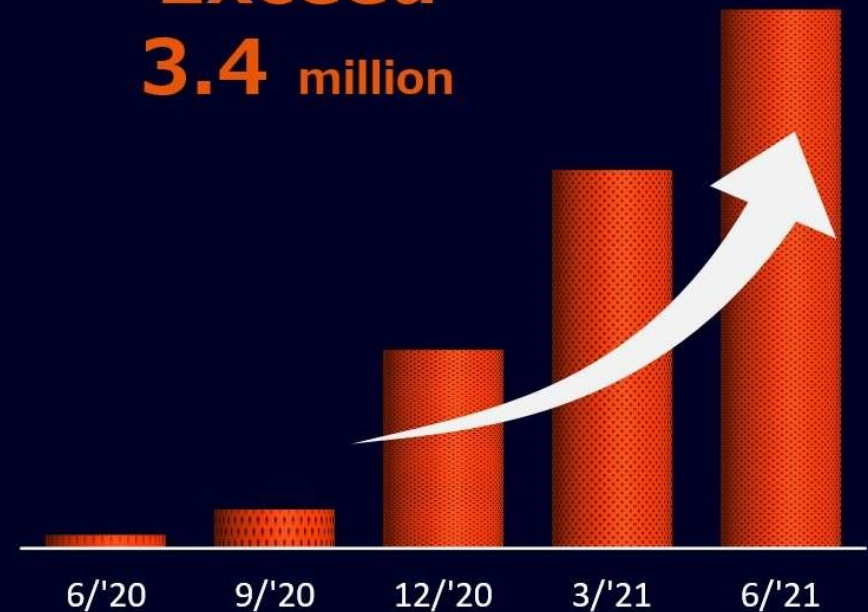

As of Oct 2021,
41 kinds of UEs
and mobile routers

Sales of 5G UEs

The end of June, 2021

Exceed
3.4 million

5G Network Deployment

We will introduce the latest global standard technologies and accelerate realization of 5G based society

5G base stations

5G/Beyond 5G investment

FY2020/E

10K

Base Stations

FY2021/E

50_K

Base Stations

(Planned)

~FY2030

\$18_B

(Planned)

5G

1. High Speed

2. Massive Device Connectivity

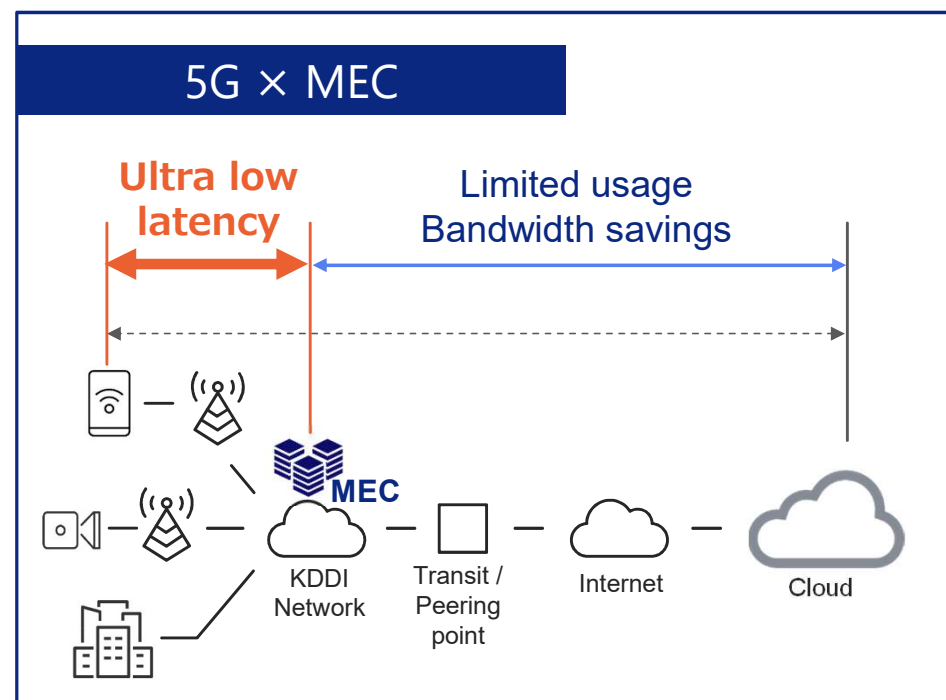

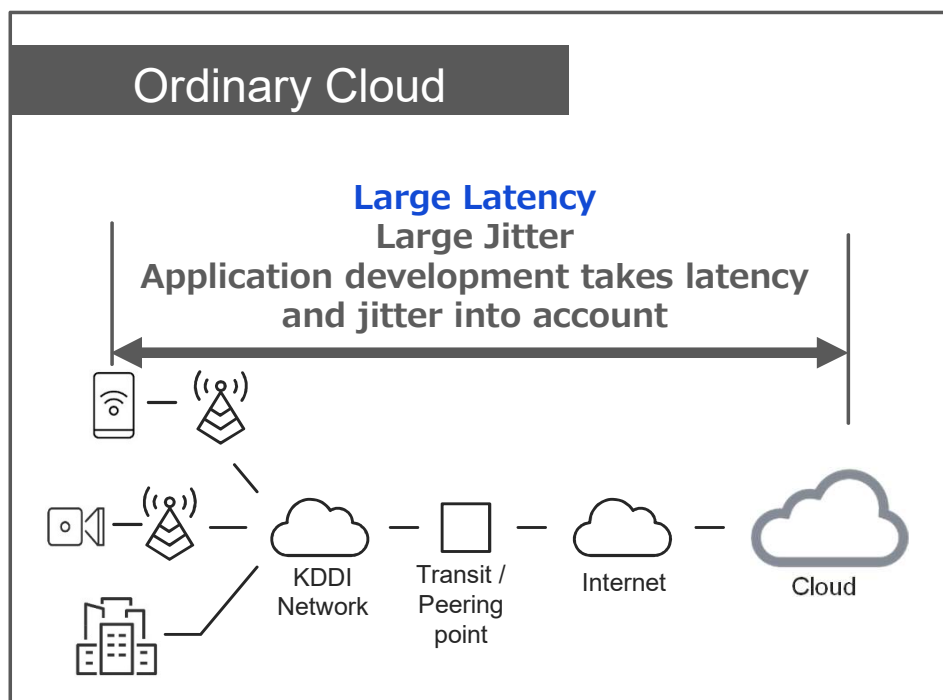

3. Ultra Low Latency

3. Ultra Low Latency

Unprecedented user experience by ultra low latency

The value of edge computing

**Ultra low latency is available with the combination of 5G and MEC.
Unprecedented user experience available to end users.**

KDDI XR Strategy

“Society 5.0” world – where data circulating between Cyber space and Physical space

Cyber space

Data analytics · Learning · Prediction

Society 5.0

Physical space

Real world · Life · New business

Data
(collection)

Feedback

Due to Covid-19 pandemic, Virtual/Cyber space activities have been advanced

Virtual SHIBUYA Halloween Fes
400,000+ joined

Virtual HAMASTA (baseball stadium)
30,000+ joined (per game)

Toward “Fusion of Virtual and Real worlds” as after-COVID is approaching

Edge Computing use cases

Major Use Cases

Healthcare (ML assisted diagnosis)

Edge computing can provide a desirable environment for ML assisted image analysis / video analysis for healthcare.

Connected Vehicles

Edge computing is suitable for gathering sensor data from vehicles, monitor in real time, and assist the vehicle.

Smart Factory

AI inference application can run on edge computing for smart factories to provide anomaly detection etc.

Real-time gaming

Gaming run on edge clouds can provide real-time game experience to end users with low performance devices.

AR / VR

Low latency of edge computing can realize rendering of AR/VR applications.

Interactive live video streaming

Interactive live video streaming with high quality video and audio can be realized by edge computing.

MEC use case 1: Virtual Human

MEC use case 2: Free-viewpoint video

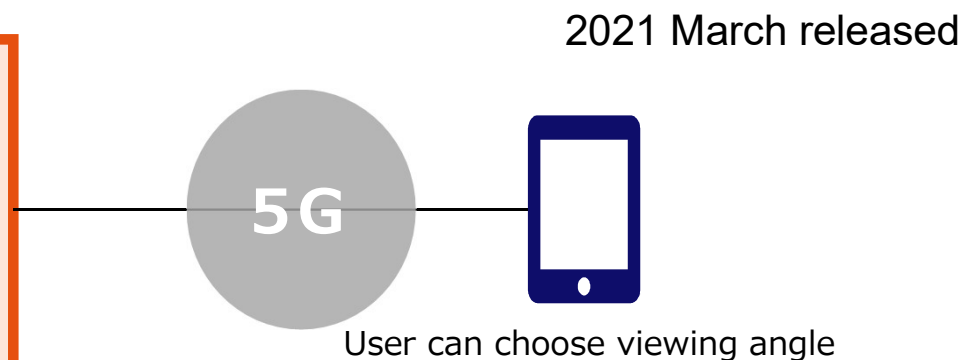

Free-viewpoint video enabled by 5G

Video image combined by multiple cameras
Specify the angle with a 5G smartphone and watch smoothly.

(KDDI CORPORATION, KDDI R & D Laboratories, Inc.)

Deployed on Wavelength

Demo Video

https://biz.kddi.com/5g/aws_wavelength/

5G × Edge Computing

Ultra-low latency and low jitter accelerates new value creation

~ 5G x Edge Computing enables new value creation on site ~

Testbed Environment

**5G×AWS Wavelength is available in “KDDI Digital Gate”,
a DX co-creation space**

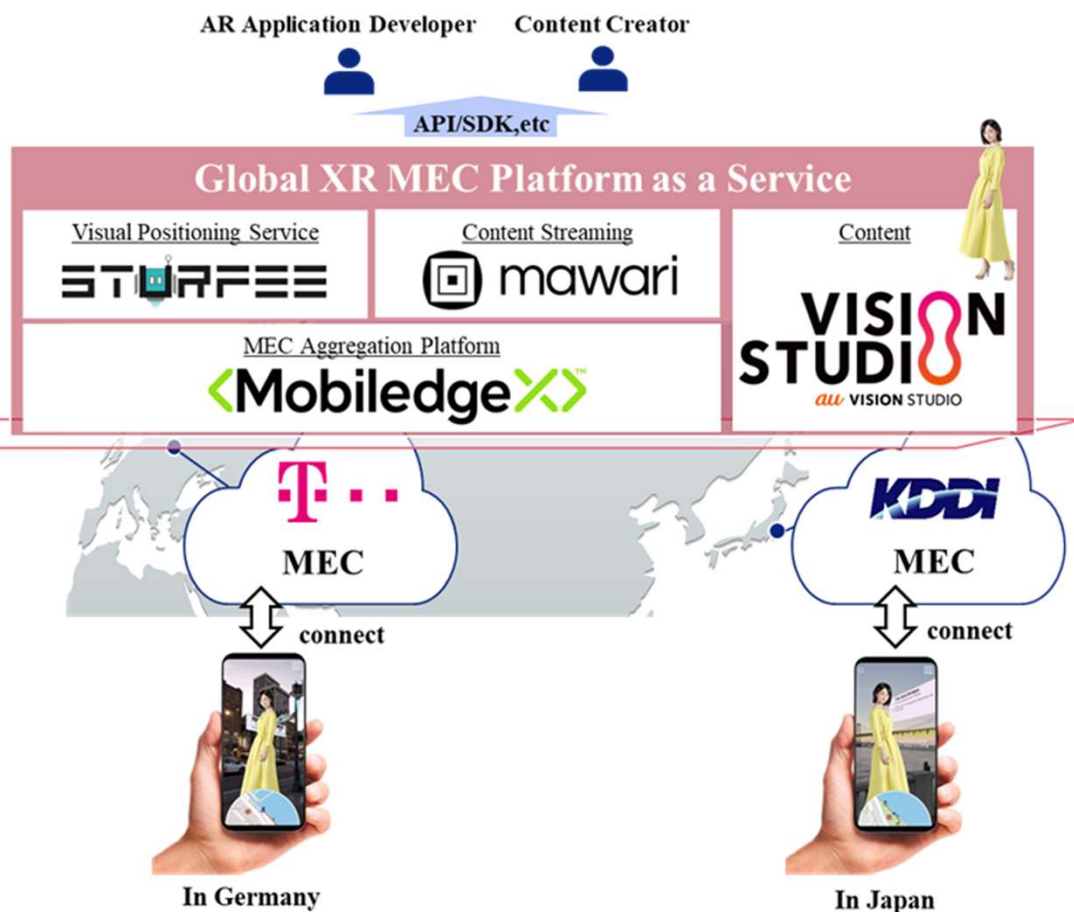

Design thinking and co-creation with partners are key components of new value creation.

GSMA TEC Trial Overview

XR MEC PaaS Trial with DT, MeX, Sturfee, Mawari

Concept:

Easy and consistent way of developing XR applications and deploying to global Multiple Operator MECs

Teaming up:

- Operator MECs – DT in Germany and KDDI in Japan
- Platform – MoblidgeX
- Application – Sturfee and Mawari

Launched in June 2021, as part of GSMA MEC Trials initiative

- Press-released on 29 June 2021

Acceleration of global edge-enabled XR application development

- PaaS providing XR core techs (VPS and XR-streaming) as API/SDK
 - > Developers can locate their immersive XR content on **various global regions!**
 - VPS: satellite-imagery based high-precision localization system of Sturfee
 - XR-streaming: New delivery framework for an interactive 3D Content of Mawari

KDDI's au VISION STUDIO created a super photo-realistic 3DCG character "coh" which looks like real humans

-> Rendering requires huge computing resources and cloud based processing on top of **5G edge NW is essential to realize ultra-low latency interactive UXs.**

MobiledgeX Edge-Cloud platform provides **unified access to 5G edge networks** jointly provided by KDDI and Deutsche Telekom

TEC Trial Results

- Global PaaS for edge-enabled XR techs successfully completed!
 1. Sturfee/Mawari could easily deploy their **unified backend services** on top of a common platform (MobileEdgeX) across KDDI's and Deutsche Telekom's 5G edge resources
 - > Dynamic/Optimized deployment with just one API call to multiple MNO's edge networks
 2. The demo app delivers multiplayer experience featuring hyper-realistic, personalized digital assistants that lead app users on a guided tour of Bonn, Germany or Tokyo, Japan.
 - > Various immersive XR content can be overlaid atop the user's real world view via VPS

The screenshot shows the GSMA Future Networks website. The top navigation bar includes links for ABOUT, WHAT WE DO, MEMBERSHIP, SERVICES, EVENTS, and NEWS, along with a search icon. The main heading is "Future Networks". Below this, there is a "Back" button and a "Menu" section with links to 5G, Operator Platform, RCS, IP Services, Events, News, Resources, and Newsletter. The main content area features a news article titled "KDDI, Deutsche Telekom and partners demonstrate next generation AR mobile app experience in alignment with GSMA TEC initiative". The article is dated Tuesday 26 Oct 2021 and includes a video player showing a person using an AR mobile app. The video player has a play button overlay. Below the video, there is a caption: "KDDI Corporation, Deutsche Telekom AG, MobiledgeX, Sturfee and Mawari have jointly".

Next Steps/Future Plans toward MWC Barcelona

- Make the APIs/SDKs available for XR developers' use via "KDDI Open API"
- Collaboration with additional MNOs and expand coverage in the world
- Develop and deploy innovative applications / use cases using the XR MEC PaaS

-> Accelerate the fusion of Virtual/Real worlds with 5G and MEC
