

# Welcome to the World of Standards

## THE ROLE OF STANDARDS IN THE EVOLUTION OF TELECOMMUNICATIONS

Luis Jorge Romero, ETSI Director General for WTC 2012, 4-7 March 2012, Japan

# Social networks...

... and what about this one?

# Go back in time for a moment

- 1900: 20 000 telephone companies in US
  - Islands of connectivity
- Geographical (national) monopolies for operators
- Operator provided the terminals, matched for his network
- Preferred (national) equipment provider built network to unique national characteristics
- Key characteristic of telephone type approval: impedance matching and switch manufacturer
  - Impedance depended on average line length in each country
  - Average line length depended on geography and urbanisation
- No real standardization inside networks

- For international interconnection: CCITT / ITU

- Building bridges between the islands

# It really started in the 1980s

- Deregulation, liberalisation, privatisation, open market, competition
- 1982 in US: AT&T split into Baby Bells: deregulation and competition
- Europe: GSM license regime forced competition, new entrants
  - Multiple operators required per country
- 1988: ETSI created to provide standards for open European market
  - Standards for core network equipment market
  - Standards for interconnection
  - Standards for terminal equipment

- Lower development & production costs, enable specialisation and commoditisation
- Allow access to new markets
- Increase competition - good for the customer
- Give improved product confidence and Interop
- Encourage innovative cooperation
- Turn good ideas into commercial success
- ...

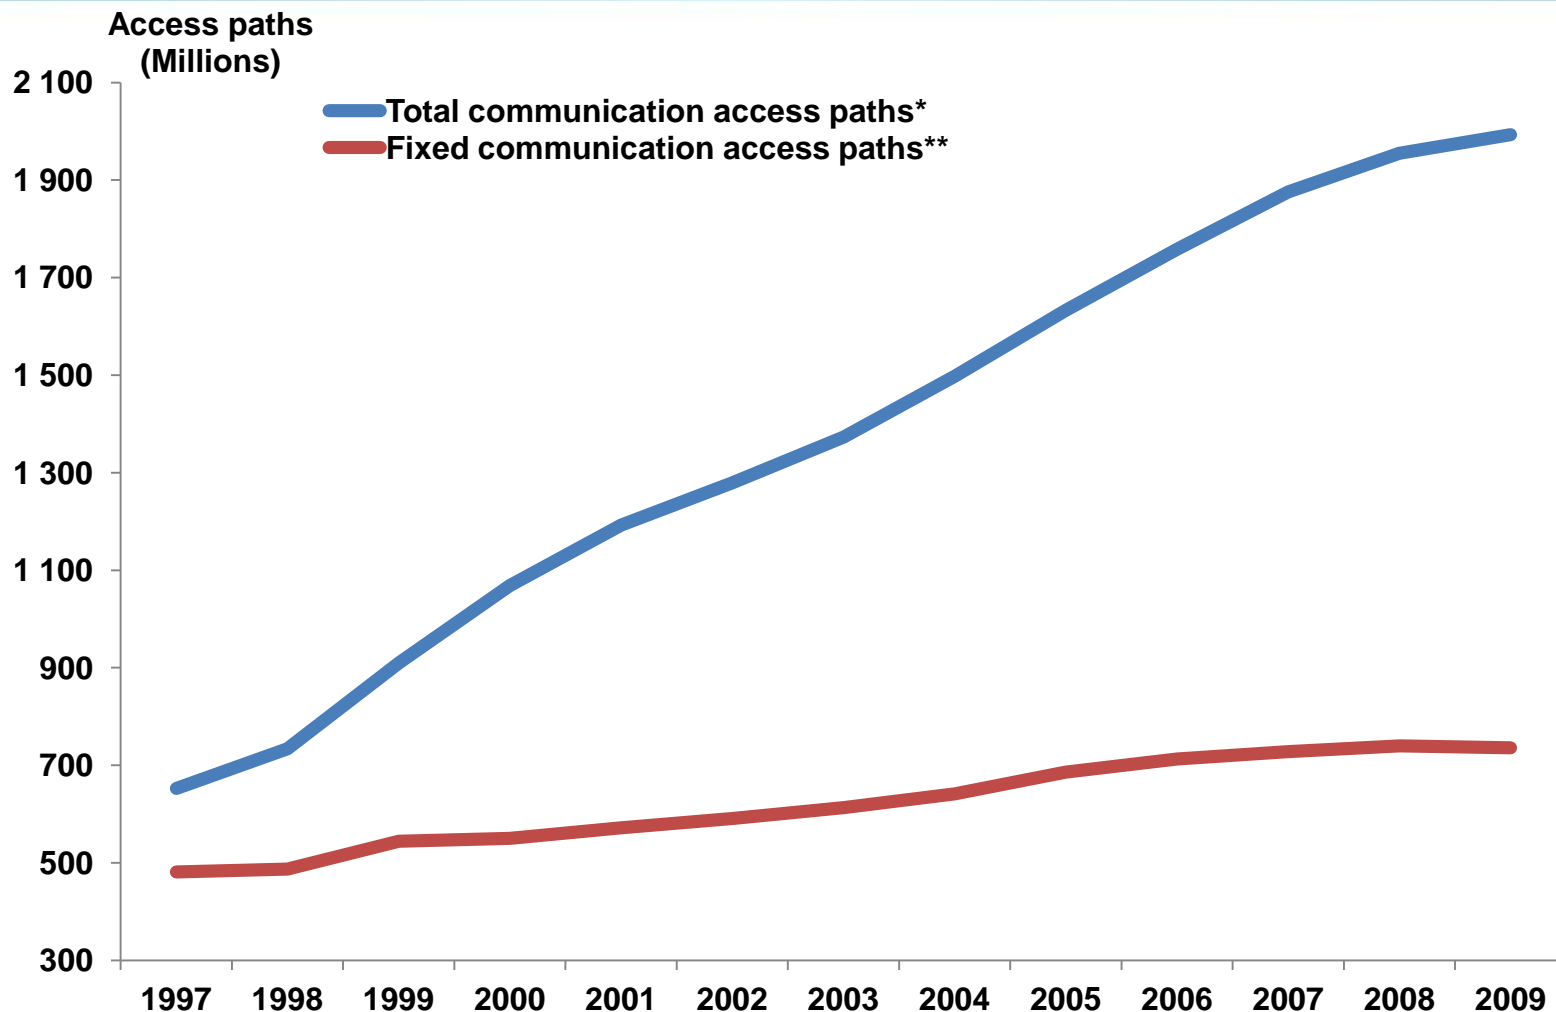

## **The Bottom Line**

# THE case study

# Growth of telecoms access (fixed & mobile)

(\*) Total communication access paths: Analogue lines + ISDN lines + DSL + cable modem + fibre + other + mobile

(\*\*) Fixed communication access paths: Analogue lines + ISDN lines + DSL + cable modem + other + fibre

- 3GPP: Third Generation Partnership Project
  - Japan, Korea, China, US & Europe
  - 6 standards bodies, c. 400 companies
- 17 working groups, 4 Plenary groups
- Meeting 4-8 times/year across the globe, 1 week meetings
  - some delegates spend >3 months/year sitting in meetings!
- Up to 300 delegates, 1 000 documents for EACH meeting
- Average 4 000 delegate days per month in meetings
- 14 delegate centuries since creation of 3GPP in 1998
- Approx 2 000 specifications published each year
  
- And still growing...

# AND there are ALSO other cases...

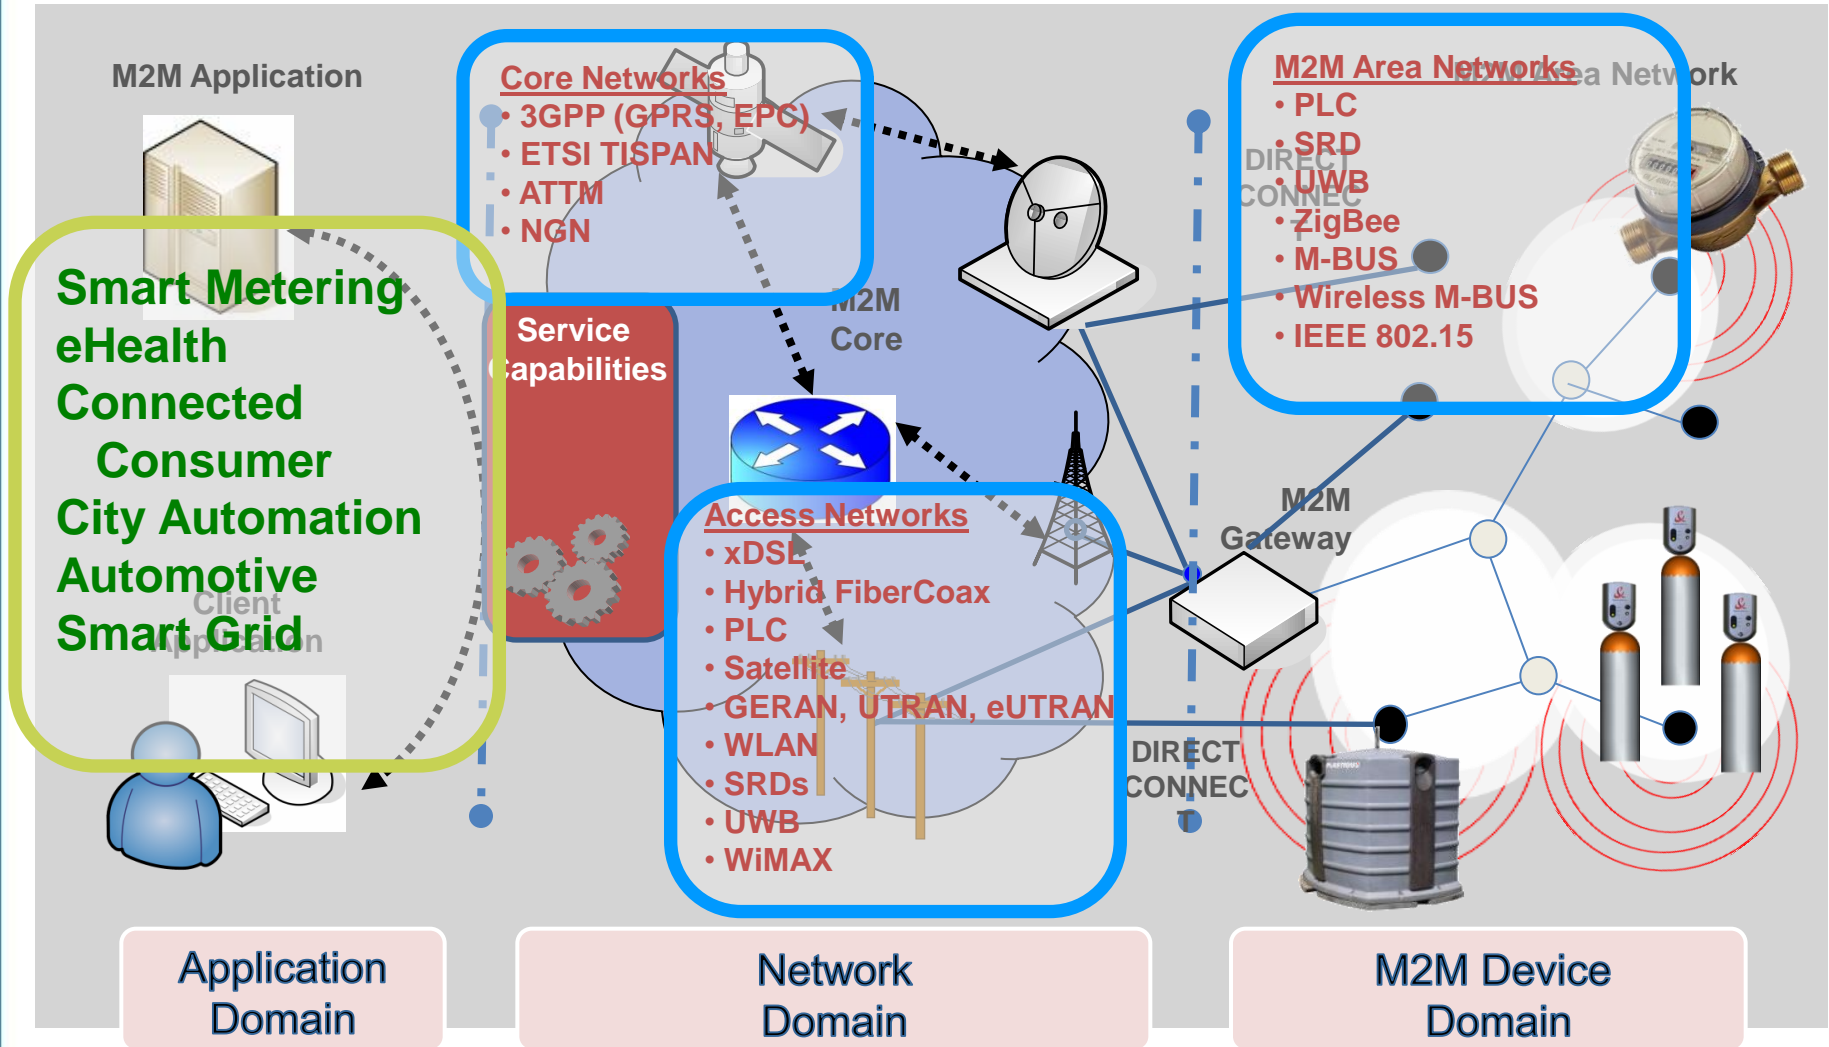

🌐 Some tested and developed (and huge success stories)

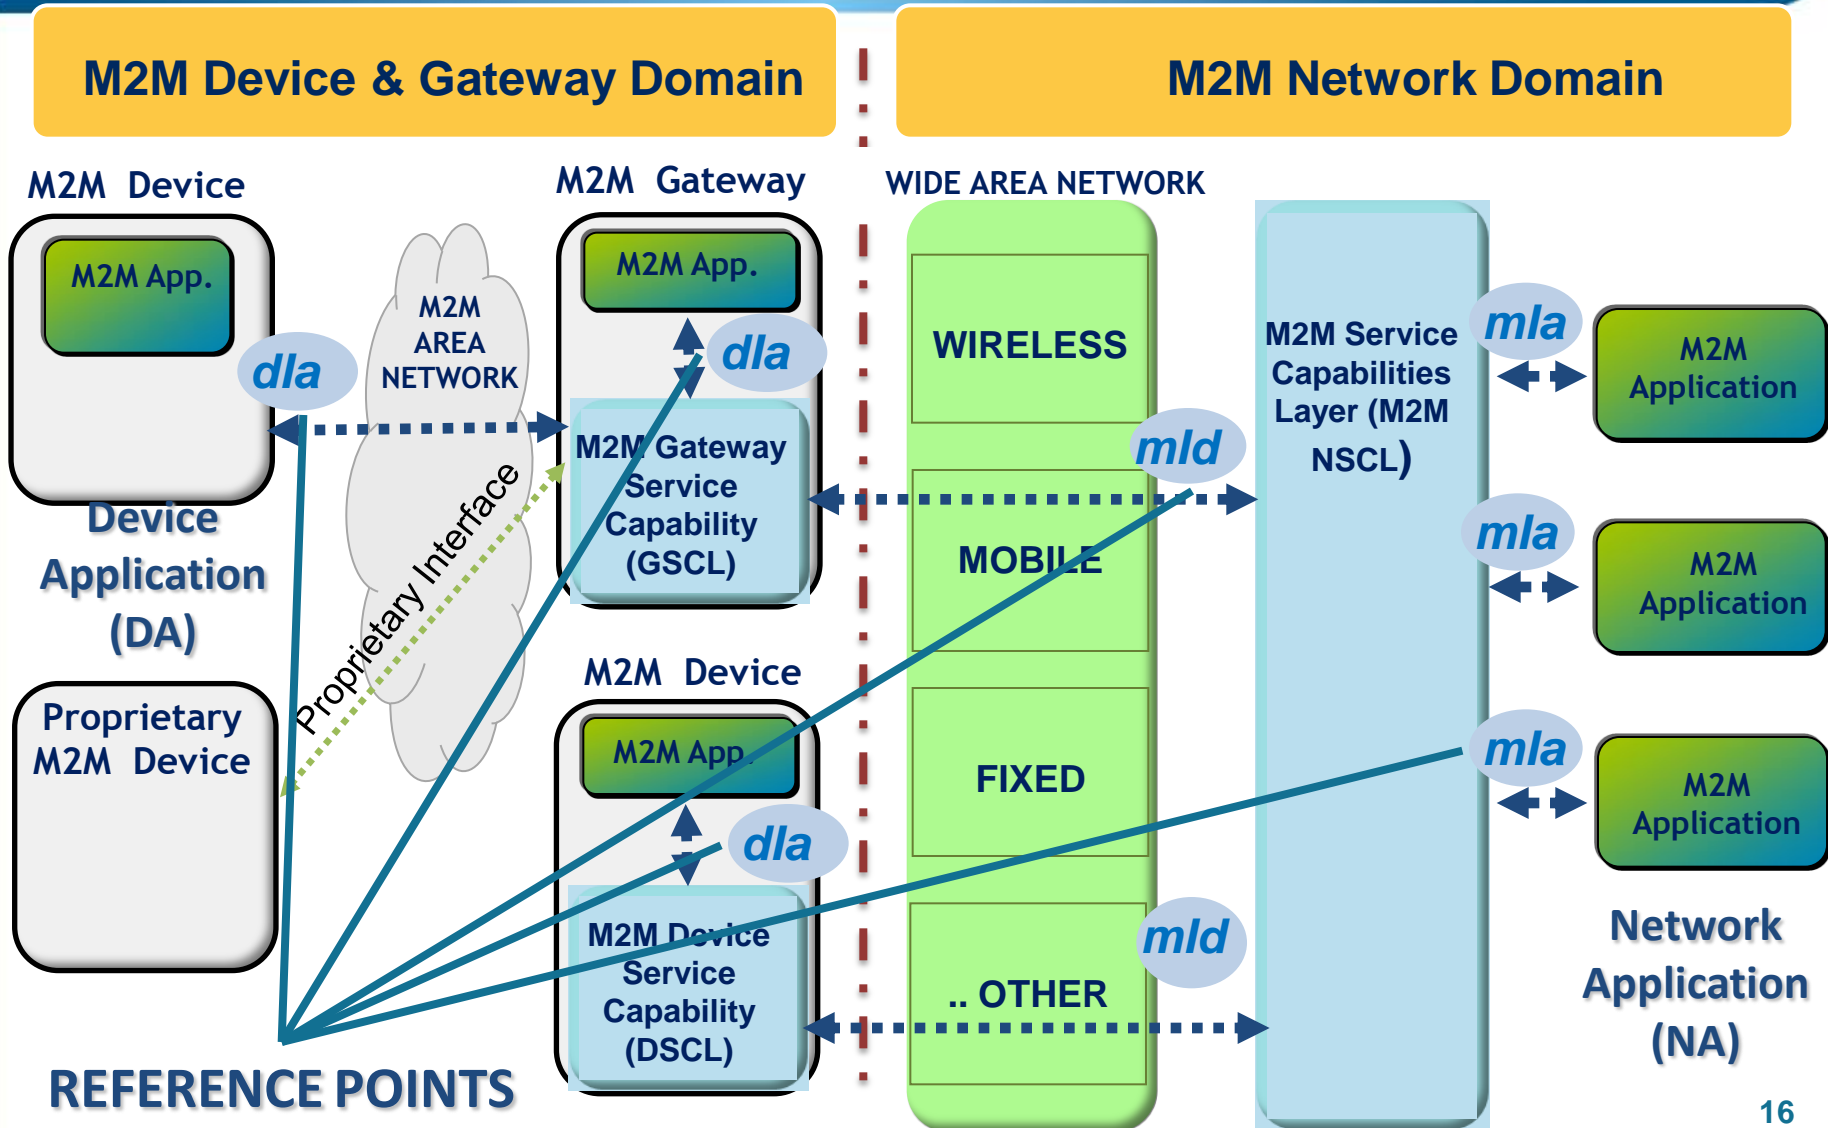

- DECT
- TETRA
- Ethernet
- TCP/IP
- IEEE 802.11x, 16x families
- ...

🌐 And some more to come...

**Highly Elastic !**

- 🌐 Hot news from Barcelona

## ...we didn't have open standards?

- 1 network – 1 user/network interface specification
  - 1 network – 1 preferred terminal vendor
- 
- 🌐 App stores?
  - 🌐 Chipset price and miniaturisation?
  - 🌐 Handset size and price?
  - 🌐 Handset brand competition?
    - No Sony, no Samsung, no HTC, no iPhone in Europe!
  - 🌐 Colour displays?

**THANK YOU!**
